

Answers: Introduction to radians

Ifan Howells-Baines, Mark Toner

Summary

Answers to the questions relating to the guide on radians.

These are the answers to [Questions: Introduction to radians](#).

Please attempt the questions before reading these answers!

Q1

1.1. Multiplying 30° by π and dividing by 180 gives $\frac{30\pi}{180} \text{ rad} = \frac{\pi}{6} \text{ rad} = 0.524 \text{ rad}$ to three decimal places.

1.2. Multiplying 105° by π and dividing by 180 gives $\frac{105\pi}{180} \text{ rad} = \frac{7\pi}{12} \text{ rad} = 1.833 \text{ rad}$ to three decimal places.

1.3. Multiplying 298° by π and dividing by 180 gives $\frac{298\pi}{180} \text{ rad} = \frac{149\pi}{90} \text{ rad} = 5.201 \text{ rad}$ to three decimal places.

1.4. Multiplying 61° by π and dividing by 180 gives $\frac{61\pi}{180} \text{ rad} = 1.064 \text{ rad}$ to three decimal places.

1.5. Multiplying 353° by π and dividing by 180 gives $\frac{353\pi}{180} \text{ rad} = 6.161 \text{ rad}$ to three decimal places.

1.6. Multiplying 197° by π and dividing by 180 gives $\frac{197\pi}{180} \text{ rad} = 3.438 \text{ rad}$ to three decimal places.

Q2

2.1. Multiplying $\frac{\pi}{3} \text{ rad}$ by 180 and dividing by π gives $\frac{180\pi^\circ}{3\pi} = 60^\circ$.

2.2. Multiplying $\frac{2\pi}{3} \text{ rad}$ by 180 and dividing by π gives $\frac{360\pi^\circ}{3\pi} = 120^\circ$.

2.3. Multiplying $\frac{\pi}{7} \text{ rad}$ by 180 and dividing by π gives $\frac{180\pi^\circ}{7\pi} = 25.714^\circ$ to three decimal places.

2.4. Multiplying $\frac{5\pi}{7} \text{ rad}$ by 180 and dividing by π gives $\frac{900\pi^\circ}{7\pi} = 128.571^\circ$ to three decimal places.

2.5. Multiplying 5 rad by 180 and dividing by π gives $\frac{900^\circ}{\pi} = 286.479^\circ$ to three decimal places.

2.6. Multiplying $\frac{3}{4}$ rad by 180 and dividing by π gives $\frac{540^\circ}{4\pi} = \frac{135^\circ}{\pi} = 42.972^\circ$ to three decimal places.

Q3

3.1. In this case, the length of the arc is $\frac{7\pi}{8} = 2.749$ (to 3dp) and the area of the sector is $\frac{49\pi}{16} = 9.621$ (to 3dp).

3.2. In this case, the length of the arc is $\frac{\pi}{2} = 1.571$ (to 3dp) and the area of the sector is $\frac{\pi}{12} = 0.262$ (to 3dp).

3.3. In this case, the length of the arc is $14\pi = 43.982$ (to 3dp) and the area of the sector is $\frac{525\pi}{2} = 824.668$ (to 3dp).
