

# Questions: Trigonometric identities (degrees)

Dzhemma Ruseva

## Summary

A selection of questions on trigonometric identities, where angles are measured in degrees.

*Before attempting these questions, it is recommended that you read [Guide: Trigonometric identities \(degrees\)](#).*

## Q1

Using trigonometric identities, find the values of the following expressions:

- 1.1.  $2(6 \sin^2(\theta)) + 3(4 \cos^2(\theta)).$
- 1.2.  $10(7 \sin^2(\theta)) + 14(5 \cos^2(\theta)).$
- 1.3.  $5 \left( \frac{6}{\csc^2(\theta)} \right) + 15 \left( \frac{2}{\sec^2(\theta)} \right).$
- 1.4.  $(\cos^2(\theta) - \sin^2(\theta))^2 + 4\sin^2(\theta) \cos^2(\theta)$
- 1.5.  $2 \sin(30) \cos(15) + 2 \cos(30) \sin(15)$
- 1.6.  $3 \cos(45) \cos(15) - 3 \sin(45) \sin(15)$
- 1.7.  $\sin(150) + \sin(30)$
- 1.8.  $\cos(150) + \cos(30)$

## Q2

Simplify the following expressions:

- 2.1.  $\tan(\theta) \cos(-\theta)$
- 2.2.  $\tan(-\theta) \csc(-\theta) \sec(-\theta)$
- 2.3.  $\tan^2(\theta) + \sin^2(\theta) + \cos^2(\theta)$
- 2.4.  $\frac{2 \sin(\theta)}{\cos(\theta)(1 - \tan^2(\theta))}$

$$2.5. \quad \frac{\sin(7\theta) + \sin(3\theta)}{\cos(7\theta) - \cos(3\theta)}$$

$$2.6. \quad \frac{\sin(5\theta) - \sin(\theta)}{\cos(5\theta) + \cos(\theta)}$$

### Q3

Using trigonometric identities, answer the following questions:

- 3.1. What is the value of  $\cos(210^\circ)$ ?
- 3.2. What are the values of  $\sin(135^\circ)$  and  $\sin(225^\circ)$ ?
- 3.3. If  $\sin(50^\circ)$  has the value 0.766 (to 3 decimal places), what is the value of  $\cos(130^\circ)$  to three decimal places?

### Q4

Using trigonometric identities, find **exact** values of the following:

- 4.1.  $\sin(15)$
- 4.2.  $\cos(15)$
- 4.3.  $\tan(15)$
- 4.4.  $\sin(75)$
- 4.5.  $\cos(75)$
- 4.6.  $\tan(75)$
